

Enabling STT & TTS for Offline Mode

Right now, all the devices are not supporting offline speech input. However, you can follow this discussion to enable offline speech input for supported devices.

I have downloaded speech input packages on my Nexus 5 and offline speech is working fine.

1. On your device go to **Settings -> Language and Input**. Click on icon on **Google voice input**.
2. Under **ALL** tab select the language you want to download.
3. Once the language package downloaded, you can see it under **INSTALLED** tab.

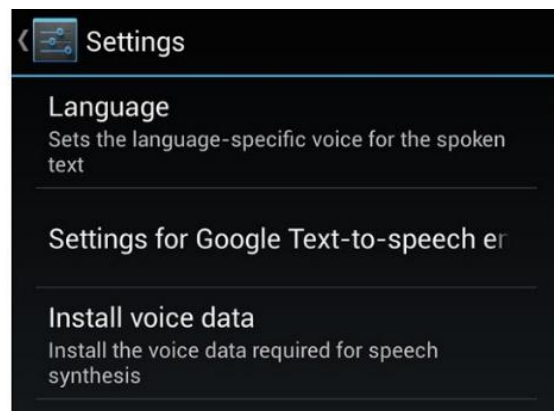

Speech-to-Text

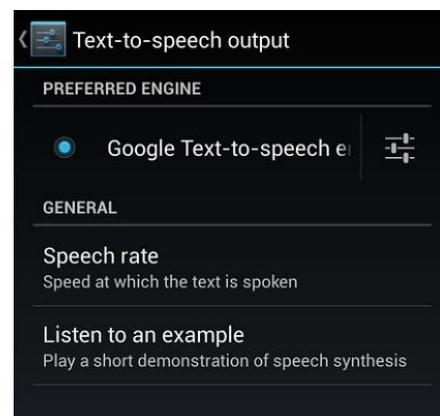

Part 1: How do I use Google text-to-speech?

Before anything else, you will need to enable Android text-to-speech capabilities from the Android Setting menu. Here is how you can activate Android TTS on your device:

1. Go to the Language and input panel and tap on Text-to-speech options at the bottom of the screen.

2. Click on your Preferred TTS engine. You will be able to find Google text-to-speech engine, as well as one from your device manufacturer if any.

3. On the same window, you are able to customize the Speech rate, Default language status and Listen to an example.

4. You will be able to find a wide range of languages that are supported by the TTS technology.

Google TTS voice data	English (United States) voices
German (Germany)	Female 6.8MB
English (United Kingdom)	Female (high quality) Download (~244MB) 
English (United States)	
Spanish (Spain)	
Spanish (United States)	
French (France)	
Italian (Italy)	
Korean (South Korea)
